(Notes) 1. Net loss ratio = (net claims paid + loss adjustment expenses) / net premiums written x 100

2. Net expense ratio = (commissions and collection expenses + operating expenses and general and administrative expenses for underwriting)

/ net premiums written x 100

3. Combined ratio = net loss ratio + net expense ratio

4. The calculation is exclusive of residential earthquake insurance and CALI\*

\* CALI stands for compulsory automobile liability insurance, and the same hereinafter

5. Incurred losses (including loss adjustment expenses) = net claims paid + loss adjustment expenses + movement in outstanding claims

6. EI loss ratio = incurred losses (including loss adjustment expenses) / earned premiums x 100

Earned premiums are calculated based on unearned premiums (excluding underwriting reserves for natural disasters), premium reserve, etc.

(Notes) 1. Net loss ratio = (net claims paid + loss adjustment expenses) / net premiums written x 100

2. Net expense ratio = (commissions and collection expenses + operating expenses and general and administrative expenses for underwriting) / net premiums written x 100

3. Combined ratio = net loss ratio + net expense ratio

4. The calculation is exclusive of residential earthquake insurance and CALI.

5. Incurred losses (including loss adjustment expenses) = net claims paid + loss adjustment expenses + movement in outstanding claims

6. EI loss ratio = incurred losses (including loss adjustment expenses) / earned premiums x 100

Earned premiums are calculated based on unearned premiums (excluding underwriting reserves for natural disasters), premium reserve, etc.

2. Net expense ratio = (commissions and collection expenses + operating expenses and general and administrative expenses for underwriting) / net premiums written x 100

3. Combined ratio = net loss ratio + net expense ratio

4. The calculation is exclusive of residential earthquake insurance and CALI.

5. EI loss ratio = incurred losses (including loss adjustment expenses) / earned premiums x 100

Incurred losses (including loss adjustment expenses) = net claims paid + loss adjustment expenses + movement in outstanding claims Earned premiums are calculated based on unearned premiums (excluding underwriting reserves for natural disasters), premium reserve, etc.

(Primary assumptions of the forecasts)

The forecast of net premiums written is based on the Company's own estimate taking into account the trends in the consolidated business results.
Incurred losses (which are the sum total of net claims paid and movement in outstanding claims) caused by natural disasters in Japan for the year ending

March 31, 2021 are assumed to be ¥37.5 billion at Mitsui Sumitomo Insurance Co., Ltd. and ¥22.5 billion at Aioi Nissay Dowa Insurance Co., Ltd..

• Market interest rates, currency exchange rates and stock prices are assumed to be at almost the same level as September 30, 2020.

• Incurred losses caused by the spread of COVID-19 are estimated to be ¥48.0 billion.

As for the impact of COVID-19, we mainly expect an increase of approximately ¥39.0 billion in incurred losses in international business, and a decrease of approximately ¥28.0 billion in investment gains and losses in domestic business. The impact on net income is expected to be approximately ¥ (57.0) billion.

The Company's consolidated earnings forecasts have been made based on certain assumptions including those above mentioned but actual results may differ substantially from these forecasts depending on various factors.

### **Non-Consolidated Solvency Margin Ratio**

Insurance companies running their business in Japan calculate the non-consolidated solvency margin ratio pursuant to the provisions of Articles 86 and 87 of the Insurance Business Act Enforcement Regulations and Public Notice No. 50 issued by the Ministry of Finance in 1996.

While insurance companies set aside reserves to provide for payments of insurance claims should an insured event occur, they are also required to maintain sufficient funds to pay out in an event outside the normal range of estimates such as a major catastrophe and a significant drop in the value of their assets.

The non-consolidated solvency margin ratio, or item (C) in each of the tables below, which is calculated in accordance with the Insurance Business Act, is the ratio of "solvency margin of insurance companies calculated based on their capital and other reserves", or (A) the total amount of solvency margin, to "risks exceeding the normal range of estimates", or (B) the total amount of risks.

The non-consolidated solvency margin ratio is one of the objective indicators used by the insurance regulatory authorities to supervise insurance companies. A non-consolidated solvency margin ratio of 200% or over indicates adequate ability to satisfy insurance claims and other payment requirements.
