dependent on whether or not an accident has been reported for a year, like conventional

safely on their premium rates, thereby enabling them to enjoy discounts without reducing
their maximum compensation amounts.

There are three-year policies and two-year policies. The premium rates applicable for the
second and third years are about 3.5 percentage points lower than those of existing
one-year policies, regardless whether or not the policyholder had an accident. (In other
words, the three-year type cuts total premium payments by about two percentage points on

three years.)
